THE FACE & BODY SKIN TIGHTENING SOLUTION

- Exclusive to North London Swiss Care Clinic

WHAT IS BDG? (Biodermogenesi)

A non-invasive scientifically proven method for skin tightening and regeneration for the face and body.

HOW IT WORKS?

It works thanks to a synergy based on electromagnetic field combined with electrostimulation and vacuum. This synergy has shown that we can regenerate our skin by reorganizing its structure. The quantitative and qualitative increase of type III collagen and elastic fibers and cell mitosis are combined with an increase in hydration and the normalization of pH. At the same time, we witness a reduction of fibrosis and inflammation.

The treatment of Biodermogenesi® is carried out with the appliance Bi-one® 2.0 MD, protected by international patents, and a group of synergistic active ingredients.

IS IT SAFE?

BDG is a safe treatment because it reactivates the physiological endogenous ionic activity of our skin without subjecting it to the potential alterations typical of exogenous stimulations.

The absolute lack of side effects and down time allows the use of on a large number of patients regardless of seasonality and skin photo type.

WHAT ARE THE BENEFITS?

- *Non-invasive & safe treatment*
- *No side effects & down time*
- *No limitation on patients lifestyle or sun exposure*
- *Scientifically proven*
- *Effective result in over 95% of treated cases*
- *Effective after the first treatment*

WHAT AREAS CAN IT TREAT?

Used in aesthetic medicine for the **skin regeneration** of the **face and neck and hands and forearms**, for the dermal-epidermal restructuring of **stretch marks, post-surgical scars and burns, for the remodeling of breasts and buttocks**, for treatment of **cellulite**.

SCIENCE BECOMES BEAUTY

Biodermogenesi® treatment is based on the synergy, never used before, between electromagnetic field, vacuum and electrostimulation.

THE SCIENCE BEHIND BDG? (Biodermogenesi)

The electromagnetic field reactivates the pumping of sodium and potassium through the membranes and promotes nourishment and cellular detoxification.

The action of the variable intensity vacuum favors the vascular gymnastics of the arterial capillary, improving the vascularization of the tissue and increasing the supply of oxygen and nutritional elements. At the same time stimulates the recovery of the toxins present in the part of the lymphatic microcirculation matrix.

Biodermogenesi® is an innovative technology capable of restoring the maximum regenerative power of our skin. Selected by the Council Presidency Innovation Agency among the Italian patents with the highest technological and innovative content.

FIELDS OF APPLICATION

Anti-aging treatment

- Wrinkle reduction
- Increased skin turgidity
- Increased skin hydration
- PH normalization
- Reduction of excess sebum
- Reduction sagging
- Increased stromal substance

Stretch marks

- Effective on any type of stretch marks and all skin types and fill with an average of 83.55%
- Tanning of the stretch marks on 100% of patients undergoing a complete cycle of sessions

Skin hypotonia of body and breasts

- Quantitative and qualitative increase of elastic fibers
- Increased firmness and elasticity
- Remodeling of the treated area

Cellulite

- Reduction in volume and evidence of the nodule
- Greater uniformity and compactness
- New angiogenesis

Hypotrophic scars, hypertrophic scars, keloids, burn scars.

- Filling of hypotrophic scars
- Retraction and flattening of hypertrophic scars and keloids
- Reductions in fibrosis induced by scars
- Remission or reduction of pain induced by scars
- Recovery of joint motility reduced by scars
- Softening of scars, even in the skin transplantation cases
- Reduction of skin discoloration

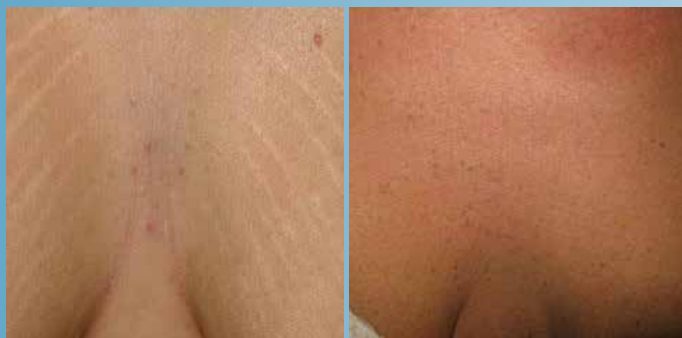

“A TREATMENT THAT WORKS”

Case Studies

before

after

Patient with white, opaque and deep stretch marks over 7 years old.

After the BDG treatment, it is clearly visible the improvement of the striae, filled and leveled but also perfectly tanned, consequently became very similar to the surrounding tissue.

before

after

Patient with abdomen compromised by an infection due to pearcing and subsequent atrophy of periumbellic area after the cortisone cure.

The treatment of BDG has allowed a complete recovery of the skin tissue, which is compact, hydrated and elastic.

before

after

71-year-old patient with photo-aging wrinkles on the forehead.

After 3 sessions of BDG the result is significant, the forehead is much smoother and more compact, wrinkles strongly attenuated and the skin more hydrated. The perception is a remarkable skin rejuvenation.

Patient with cellulite and skin hypotonia.

After a cycle of BDG sessions, the improvement of cellulite and an increase in skin tone are clearly visible, with a substantial remodeling of the buttocks.

Patient before and after a cycle of BDG sessions.

There is an evident filling of the nasogene wrinkle and a much more compact skin tissue, with a lifting of the face features.

47-year-old patient with 7-year post-surgical keloid

The keloid is completely regressed, linea alba is visible again. It's pigmented with sun exposure, consequently gained a uniform color with the surrounding skin.
